

## Golden Ninebark

*Physocarpus opulifolius 'Luteus'*

Height: 8 feet

Spread: 8 feet

Sunlight: ○ ●

Hardiness Zone: 2a

Other Names: Eastern Ninebark

### Description:

A massive, wide-sprawling shrub with showy golden leaves; features small white flowers followed by showy reddish fruit, and interesting peeling papery bark; extremely tough and durable, best used in massing as a color accent, can grow quite large

### Ornamental Features

Golden Ninebark features showy clusters of white flowers at the ends of the branches from late spring to early summer. It has attractive yellow deciduous foliage. The serrated lobed leaves are highly ornamental and turn an outstanding orange in the fall. It produces red capsules from early to mid fall. The peeling tan bark adds an interesting dimension to the landscape.

### Landscape Attributes

Golden Ninebark is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. It has no significant negative characteristics.

Golden Ninebark is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Golden Ninebark will grow to be about 8 feet tall at maturity, with a spread of 8 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
