

Sunny Foster Holly

Ilex x attenuata 'Sunny Foster'

Height: 30 feet

Spread: 20 feet

Sunlight: ○ ●

Hardiness Zone: 6b

Description:

This hybrid is a pyramidal broadleaf evergreen tree-holly with bright yellow-gold and dark green variegated foliage; yellow coloring intensifies in full sun, and may be absent in full shade; an abundance of showy red berries in winter; needs pollinator

Ornamental Features

Sunny Foster Holly is primarily grown for its highly ornamental fruit. It features an abundance of magnificent red berries from mid fall to late winter. It has gold-variegated dark green foliage which emerges yellow in spring. The spiny pointy leaves remain dark green throughout the winter.

Landscape Attributes

Sunny Foster Holly is a dense evergreen tree with a strong central leader and a distinctive and refined pyramidal form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard. It has no significant negative characteristics.

Sunny Foster Holly is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Sunny Foster Holly will grow to be about 30 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more. This is a female variety of the species which requires a male selection of the same species growing nearby in order to set fruit.

This tree does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
