

## Burgundy Enkianthus

*Enkianthus campanulatus 'Burgundy'*

Height: 10 feet

Spread: 7 feet

Sunlight: ○ ●

Hardiness Zone: 4b

Other Names: Redvein Enkianthus

### Description:

A delicate garden shrub for the collector, with dainty burgundy colored bell-shaped flowers in spring and spectacular red, orange, and yellow fall color; very fussy about growing conditions, a perfectly drained moist acidic soil is essential

### Ornamental Features

Burgundy Enkianthus features dainty racemes of lightly-scented burgundy bell-shaped flowers with dark red veins hanging below the branches from late spring to early summer. It has green deciduous foliage. The small pointy leaves turn outstanding shades of yellow, orange and red in the fall.

### Landscape Attributes

Burgundy Enkianthus is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Burgundy Enkianthus is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Burgundy Enkianthus will grow to be about 10 feet tall at maturity, with a spread of 7 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
