

**Aunt Gerry Rose**
Rosa 'Aunt Gerry'

Height: 4 feet

Spread: 3 feet

Sunlight: ○

Hardiness Zone: 4b

Group/Class: Hybrid Tea Rose

Description:

A wonderful mildly, spicy fragrant, light golden yellow rose; upright habit with excellent disease resistance; repeat blooming; all roses need full sun and well-drained soil; great for garden beds, along walkways or added to freshly cut flower bouquets

Ornamental Features

Aunt Gerry Rose is blanketed in stunning fragrant double yellow flowers at the ends of the branches from late spring to late summer. The flowers are excellent for cutting. It has dark green deciduous foliage. The oval compound leaves do not develop any appreciable fall color. The spiny brick red bark adds an interesting dimension to the landscape.

Landscape Attributes

Aunt Gerry Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance shrub that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Aunt Gerry Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Aunt Gerry Rose will grow to be about 4 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid.
