

Crème de la Crème Chaste Tree

Vitex agnus-castus 'Crème de la Crème'

Height: 15 feet

Spread: 20 feet

Sunlight: ○ ●

Hardiness Zone: 7a

Description:

A large shrub or small tree featuring amazing spikes of white flowers in summer to early autumn; distinctively palmate-leaves; can be treated like a perennial and cut back each spring, as it flowers on new wood and regrows vigorously

Ornamental Features

Crème de la Crème Chaste Tree is bathed in stunning panicles of lightly-scented white flowers rising above the foliage from mid summer to early fall. It has green deciduous foliage. The fragrant palmate leaves do not develop any appreciable fall color.

Landscape Attributes

Crème de la Crème Chaste Tree is an open multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

Crème de la Crème Chaste Tree is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Crème de la Crème Chaste Tree will grow to be about 15 feet tall at maturity, with a spread of 20 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.
