

Edgewood Japanese Maple

Acer palmatum 'Edgewood'

Height: 6 feet

Spread: 10 feet

Sunlight: ○ ●

Hardiness Zone: 5b

Other Names: Edgewood Orange Japanese Maple

Group/Class: Dissectum

Description:

A superb landscape choice with its finely-textured lace-leaf foliage and weeping habit of growth; mauve-red new foliage goes to bronze in summer, turning bright golden orange in fall; great for small home landscapes, or as an accent in the shrub border

Ornamental Features

Edgewood Japanese Maple is primarily valued in the landscape or garden for its highly ornamental weeping form. It has attractive red foliage with hints of coppery-bronze which emerges burgundy in spring. The deeply cut ferny palmate leaves are highly ornamental and turn outstanding shades of orange and gold in the fall.

Landscape Attributes

Edgewood Japanese Maple is an open deciduous shrub with a strong central leader and a rounded form and gracefully weeping branches. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Edgewood Japanese Maple is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Container Planting

Planting & Growing

Edgewood Japanese Maple will grow to be about 6 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

This shrub does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Edgewood Japanese Maple makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
