

April Snow Weigela

Weigela praecox 'April Snow'

Height: 6 feet

Spread: 4 feet

Sunlight: ○ ●

Hardiness Zone: 4b

Description:

A large upright mounded shrub with medium green colored foliage that become covered in clusters of snow white blooms from mid spring through summer; prefers full sun; great for hedging and borders

Ornamental Features

April Snow Weigela is covered in stunning clusters of white trumpet-shaped flowers along the branches in mid spring. It has dark green deciduous foliage. The pointy leaves do not develop any appreciable fall color.

Landscape Attributes

April Snow Weigela is a multi-stemmed deciduous shrub with a mounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This shrub will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting hummingbirds to your yard. It has no significant negative characteristics.

April Snow Weigela is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

April Snow Weigela will grow to be about 6 feet tall at maturity, with a spread of 4 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
